

# PRESSURE - TEMPERATURE

for various filling densities of N<sub>2</sub>O

$$\text{Filling density} = \frac{\text{Mass of N}_2\text{O [kg]}}{\text{Water capacity [l]}}$$

$$t_{\text{C}} = \frac{(t_{\text{F}} - 32)}{1.8}$$

$$t_{\text{F}} = 1.8 \times t_{\text{C}} + 32$$
